Exp. No:1

# Installation of Hadoop

1. Download Hadoop Binary file

### 2. Modifying .bashrc file

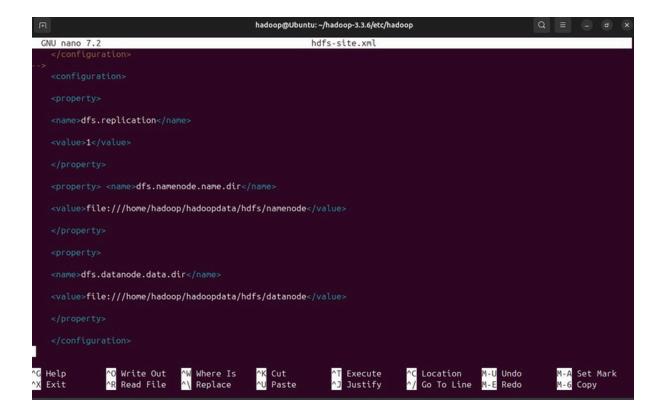

```
hadoop@Ubuntu: ~
     f /usr/share/bash-completion/bash_completion ]; then
 /usr/share/bash-completion/bash_completion
      -f /etc/bash_completion ]; ther
. /etc/bash_completion
export JAVA_HOME=/usr/lib/jvm/java-8-openjdk-amd64
export HADOOP_HOME=/home/hadoop/hadoop-3.3.6
export HADOOP_INSTALL=$HADOOP_HO
export HADOOP_MAPRED_HOME=$HADOOP_HOME
export HADOOP_COMMON_HOME=$HADOOP_HOM
export HADOOP_HDFS_HOME=$HADOOP_HOME
export HADOOP_YARN_HOME=$HADOOP_HOM
export HADOOP_COMMON_LIB_NATIVE_DIR=$HADOOP_HOME/lib/native
export HADOOP_OPTS="-Djava.library.path"=$HADOOP_HOME/lib/native"
                                                                             ^C Location
^/ Go To
            ^O Write Out
^R Read File
                                                                                                              M-A Set Mark
M-6 Copy
                            ^W Where Is
^\ Replace
                                                             ^T Execute
```

3. Updating JAVA\_HOME in \$HADOOP\_HOME/etc/hadoop/hadoop-env.sh

```
hadoop@Ubuntu: ~/hadoop-3.3.6/etc/hadoop
 GNU nano 7.2
                                                                 hadoop-env.sh
export JAVA_HOME=/usr/lib/jvm/java-8-openjdk-amd64
export JAVA HOME=
this location based upon its execution path.
                    Write Out
Read File
                                                    ^K Cut
^U Paste
                                                                                       ^C Location
^/ Go To Line
                                                                                                         M-U Undo
                                                                                                                               Set Mark
   Help
                                      Where Is
                                                                         Execute
  Exit
                                      Replace
                                                                         Justify
```

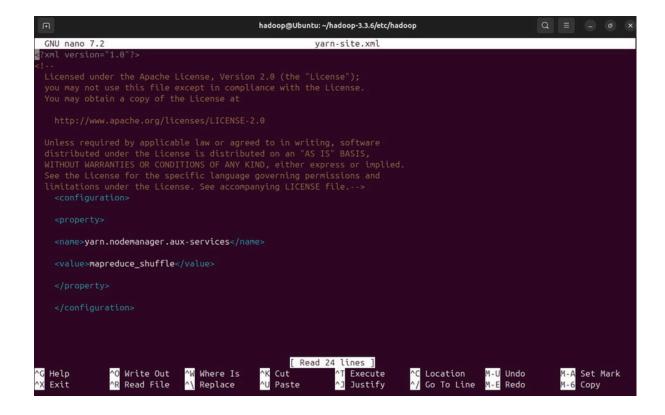

4. Modifying \$HADOOP\_HOME/etc/hadoop/core-site.xml

```
hadoop@Ubuntu: ~/hadoop-3.3.6/etc/hadoop
GNU nano 7.2
                                                                    core-site.xml
   <name>fs.defaultFS</name>
   <value>hdfs://localhost:9000</value>
                                                             [ Read 29 lines ]
                    Write Out
Read File
                                                                                           ^C Location
^/ Go To Line
                                                                                                              M-U Undo
M-E Redo
                                                                                                                                 M-A Set Mark
M-6 Copy
  Help
                                    ^W Where Is
                                                         Cut
                                                                            Execute
  Exit
                                      Replace
                                                          Paste
```

6. Modifying \$HADOOP\_HOME/etc/hadoop/mapred-site.xml

```
hadoop@Ubuntu: ~/hadoop-3.3.6/etc/hadoop
                                                                                                      Q =
GNU nano 7.2
                                                      mapred-site.xml
   <name>yarn.app.mapreduce.am.env</name>
   <value>HADOOP_MAPRED_HOME=$HADOOP_HOME/home/hadoop/hadoop/bin/hadoop</value>
   <name>mapreduce.map.env</name>
   <value>HADOOP_MAPRED_HOME=$HADOOP_HOME/home/hadoop/hadoop/bin/hadoop</value>
   <name>mapreduce.reduce.env</name>
   <value>HADOOP_MAPRED_HOME=$HADOOP_HOME/home/hadoop/hadoop/bin/hadoop</value>
                 Write Out
                                                                              Location
                                                                                                              Set Mark
  Exit
                 Read File
                                 Replace
                                               Paste
                                                               Justify
                                                                              Go To Line
```

### 8. Execute hdfs namenode -format

```
hadoop@Ubuntu: ~/hadoop-3.3.6/sbin
 adoop@Ubuntu:~/ha
                                    3.6/sbin$ hdfs namenode -format
